

MARK ONYANGO

Nairobi, Kenya | 254794606191 | onyangomarkonyango559@gmail.com | github.com/Mark-Ony

SUMMARY

Results-driven full-stack developer and AI automation specialist with proven, hands-on experience delivering production-grade web applications from backend to frontend. Demonstrated expertise in secure RESTful API design, JWT-based authentication, role-based access control, and modern UI development using React.js and Tailwind CSS. Certified AI Training Data Specialist (ICT Authority Kenya) with experience building and integrating Python-powered automation workflows. Formally recommended by Lish AI Labs for backend development and system architecture roles. Seeking to bring technical depth, engineering discipline, and a growth mindset to an Engineering or Product team.

TECHNICAL SKILLS

- **Data & AI Python Scripting**, Automated Workflow Integration, AI-Powered Tool Development, Data Extraction & Transformation, Process Automation
- **Databases** PostgreSQL, MySQL, Database Design, Query Optimization, SQL & NoSQL
- **Frontend** React.js, Tailwind CSS, Dynamic Routing, Responsive Design, Dashboard Development, Data Visualization
- **Backend** Node.js, Express.js, RESTful API Design, FastAPI (familiar), JWT Authentication, Role-Based Access Control, TypeORM
- **DevOps & Tools** Git, GitHub, Postman, CI-Ready Test Scripting, Linux & Windows Server Administration
- **Networking** LAN/WAN Configuration, IP Addressing, Network Troubleshooting, CCTV Systems
- **Soft Skills** Team Collaboration, Cross-Functional Communication, Problem Solving, Attention to Detail

PROJECTS

Pata House — Property Listing Platform (Full-Stack)

Production level property management system built during industrial attachment at Lish AI Labs

Tech Stack

React · Node.js · PostgreSQL · JWT

- Designed and developed secure RESTful APIs using Express.js, TypeORM, and PostgreSQL to manage property listings, user authentication, and role-based access control
- Implemented JWT-based authentication with secure cookie sessions, enabling seamless login, property posting, and session management for agents and end users
- Built modular, high-performance dashboards using React.js and Tailwind CSS with dynamic routing, real-time state management, and responsive design principles
- Conducted rigorous manual and automated API testing using Postman; wrote CI-ready test scripts to verify RESTful compliance, secure access flows, and fault tolerance

GitHub:github.com/developers-mania/Pata-house-project

Smart E-Commerce Sales Assistant

AI-powered dashboard helping Kenyan Instagram, TikTok, and WhatsApp sellers manage chats, leads, and M-Pesa follow-ups in one place.

Tech Stack

Next.js 14 , Express.js , Supabase , n8n , WhatsApp Cloud API · M-Pesa Daraja , OpenAI · Meta Graph API

- Co-built a multi-role seller dashboard in Next.js 14 with real-time AI conversation monitoring, a drag-and-drop Kanban lead pipeline, M-Pesa payment history, and analytics charts (Recharts)
- Engineered an Express.js backend with a full webhook layer receiving events from WhatsApp Cloud API, M-Pesa Daraja, and Instagram forwarding each to the correct n8n automation workflow.
- Designed and implemented 7 n8n AI automation workflows including: AI caption generator (auto-posts to Instagram, Facebook, TikTok, WhatsApp Status), AI WhatsApp Sales Agent, M-Pesa STK Push payment handler, follow-up agent, auto-repost scheduler, and daily revenue report
- Integrated M-Pesa Daraja STK Push end-to-end AI detects buying intent in WhatsApp chat, collects name and location, triggers payment, confirms via Daraja webhook, and creates the order automatically
- Built WhatsApp deep link system that pre-loads product context into every customer chat, giving the AI Sales Agent full product knowledge from the first message
- Architected the Supabase PostgreSQL schema covering 9 tables: sellers, products, posts, post analytics, leads, conversations, orders, payments, and customers with Supabase Realtime powering live dashboard updates

WORK EXPERIENCE

Full-Stack Developer (Industrial Attachment)

Lish AI Labs , Nakuru - Kenya, (June - September 2025)

- Designed and developed secure RESTful APIs using Express.js, TypeORM, and PostgreSQL to manage property listings, user authentication, and role-based access control.
- Implemented JWT-based authentication with secure cookie sessions, enabling seamless login, property posting, and session management for agents and end users.
- Built modular, high-performance dashboards using React.js and Tailwind CSS, incorporating dynamic routing, real-time state management, and responsive design.
- Analyzed API usage and system data to generate performance insights, supporting data-driven decisions for product improvement.
- Conducted manual and automated API testing using Postman, writing CI-ready test scripts to verify RESTful compliance, secure access flows, and fault tolerance across edge-case scenarios.
- Maintained code repositories and technical documentation using Git and GitHub throughout the project lifecycle.

IT Trainee (Industrial Training) Masinde Muliro University of Science and Technology (MMUST) May 2024 – August 2024

- Assisted in planning and rolling out several IT infrastructure projects at once – LAN/WAN networks, CCTV deployments, and server setups – using structured task checklists to track progress across each workflow.
- Handled equipment requisitions and tracked deliveries from vendors, maintained an asset log for newly installed hardware, and followed up when timelines slipped.
- Wrote clear, step-by-step operational procedure documents for network troubleshooting and server configuration – used directly when onboarding new members of the IT team.
- Maintained the team's maintenance schedules and service logs for Windows and Linux servers, keeping everything up to date so nothing got missed during routine checks.
- Logged, tracked, and resolved end-user support tickets, produced weekly incident summaries, and spotted recurring issues that fed into process improvement discussions.
- Visited Telkom Kenya's Mombasa offices and saw firsthand how large-scale network operations and enterprise project management actually work in a live telecoms environment.

EDUCATION

- **Bachelor of Science in Information Technology**

Masinde Muliro University of Science and Technology

August 2022 – April 2026

- **Kenya Certificate of Secondary Education**

Kanga High School

January 2018 – April 2022

Lish AI Labs
P.O. Box 16412-20100
Nakuru, Kenya

To Whom It May Concern,

I am pleased to write this letter of recommendation for **Mark Onyango**, who successfully completed his industrial attachment at Lish AI Labs. During this period, Mark demonstrated exceptional technical ability, problem-solving skills, and a commitment to building secure, scalable systems. At Lish AI Labs, Mark was a key member of the **Pata House** project team, where he contributed extensively in **Backend Development** and also supported **Frontend Development**. In this role, he actively supported the project's success by:

- **Designing and developing secure RESTful APIs** using Express.js, TypeORM, and PostgreSQL to manage property listings, authentication, and role-based access control.
- **Integrating JWT-based authentication with secure cookie sessions**, enabling seamless login, property posting, and session management for agents and students.
- **Developing modular, high-performance dashboards** with React.js and Tailwind CSS, implementing dynamic routing, real-time state management, and responsive design principles.
- **Conducting rigorous manual and automated API testing** with Postman, writing CI-ready test scripts to ensure compliance with RESTful standards, secure role-based access flows, and fault tolerance across edge-case scenarios.

Based on his performance, I confidently recommend **Mark Onyango** for future opportunities in backend development, full-stack engineering, and system architecture. I am certain that he will bring technical expertise, innovation, and dedication to any organisation he joins.

Sincerely,

Joe Karanja
